

Folio Version 4.7.2

January 2010

Products: Folio Views, Folio Builder, Folio Publisher, Folio Integrator

The Folio 4.7.2 Readme file covers the following topics:

- [What's New in Folio 4.7.2](#)
 - [System Requirements](#)
 - [Installation Instructions](#)
 - [Issues Resolved](#)
 - [Known Issues](#)
-

What's New in Folio 4.7.2

Key new items or enhancements in this release include:

- Rebranded to Rocket
- Improved compatibility with rights-managed Infobases created using previous versions of Folio. Folio 4.7.2 can open any 4.x rights-managed Infobase.
- Deleting records is now 20x faster than before.
- Improved RTF Import/Export Filter
- Increased security query string limit when using RMBatch
- Updated URL Import filter to support secure (https://) websites
- The query type-ahead and word-wheel blow-in features have been updated to automatically insert single quotes around single word field terms that have been indexed as a phrase.
- RMBatch now sets Expiration dates correctly, when running under time zones east of UTC time.
- Query templates no longer hangs Views after entering several terms when running on Windows XP.

Breaking Changes:

- The WordPerfect 6.x Import/Export filters, FrToWP6x.dll and ToWP6x.dll, have been removed from the Folio product suite. However, you may continue to use the WordPefect 5.x Import/Export filters.
-

System Requirements

Supported Operating Systems

This assumes that all operating systems are the most current release / patch

- **Folio Views:** (Windows 2000 Professional, Windows XP Home, Windows XP Pro, Windows 2003 Server, Windows Vista, Windows 7) 32 or 64-bit
- **Folio Builder:** (Windows XP Pro, Windows 2000 Professional, Windows 2003 Server, Windows Vista, Windows 7) 32 or 64-bit
- **Folio Publisher:** (Windows XP Pro, Windows Vista, Windows 7) 32 or 64-bit
- **Folio Integrator:** (Windows XP Pro, Windows Vista, Windows 7) 32 or 64-bit

Minimum System Requirements

At minimum, you need a system capable of running the operating system you have chosen. The minimum RAM and processor requirements listed here may not be sufficient to run certain operating systems.

- Intel-compatible processor running at 512 MHz or faster
- 32 MB RAM
- 50 MB hard drive space (will vary by application)
- Standard peripherals (monitor, mouse, keyboard)

Installation Instructions

1. Close all running Folio products.
2. Uninstall all previous Folio applications.
3. Run the appropriate setup application.
4. Follow the prompts as they appear on the screen.

Issues Resolved

This list identifies several issues that are either customer reported or affect the general use of the Folio applications. This list does not include all issues that we have addressed in this release (such as those that we found internally or which don't have an impact on the use of the product).

Issue #	Description
794	Why does Folio 4.x take so long to delete content through the UI?
3023	Error: The rights manager failed to initialize.
3038	Long security query strings within an RDF causes RMBatch to fail.
3050	Nfo_OpenInfobase function does not honor the bPreventModeChange flag.

3052	Importing a Word document does not retain level mappings correctly.
3053	Folio Advanced search does not automatically blow-in quotes, when user selects phrased term with the mouse.
3055	Folio Import URL using secured websites.
3056	Folio NFO exported to RTF crashes Office XP, when attempting to open the file.
3065	RMBatch does not set the Expiration dates correctly, when running under certain time zones.
3072	Query template hangs Views after entering several terms when running on Windows XP but works on Windows Vista.

Known Issues

- Folio 4.7.2 rights-managed infobases can not be opened using previous versions of Folio Views. However, earlier versions of Folio 4 rights-managed infobases may be opened in Folio 4.7.2. This is due to the updated security model introduced in Folio 4.7.0 and is by design.
